

## Using Your School Account to Sign In

At school we click on the “Sign in with Google” button on lots of web sites. It’s REALLY important to follow the directions below to sign in using the correct information. Many students already know this information, but because they are at home, they may not realize it’s the same procedure.

Use [sso.conroeisd.net](https://sso.conroeisd.net) to log in to the district SSO page.

If you don’t remember your sign in credentials, email your teacher. Do not ever try to change your username and password.

Before you do anything else, or go to any other website, click the Google Drive icon.

The system may show a window that asks to authenticate, to make sure the system is matching the correct Google account. Click Authorize. If it is not showing your account, then click Choose another account.

**You should not skip this step. You should be able to see files in your Google Drive before you do anything else.**

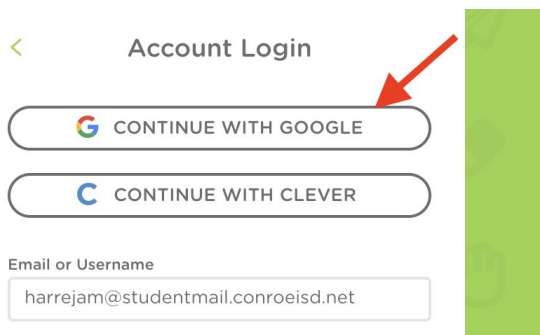

**AFTER** you have seen the items in your Google Drive, you are now ready to do whatever else you want to do on your computer. In this example, we will be going to another online tool. Click the + tab to open a new tab.

Type in the address for the website you want to “sign in with Google.”

Choose Continue with Google. Maybe you will see another window that asks you to authorize. If you see your email, then click Authorize, and if you don't then click the button to choose another account.

Assignment Name	Feedback
Ms. Osterman - Osterman 19-20	
5.3 D - Modeling Decimal Multiplication Level	0
Analyzing Data	0
Area, Perimeter and Volume-Level	0
Dividing Decimals with Models	0
Dividing Whole Numbers (Computation)	0
Dividing Whole Numbers Quiz (Word Problems)	0
Geometry Review-Level	0
Improper and Mixed Numbers 19-20	0

At this point, you probably see your work in the system, or if you are using a new program you are “in the program.”

In this case, the student is in her account.

YaY!
